

6 GREEN WALL SYSTEMS & FABRICATION

Year 4 Fall Studio *Group Project*
Roles: Research, design, coordination, fabrication
Client: LSU Hill Farm, LSU Student Sustainability Fund
Advisor: Brendan Harmon, Hye Yeon Nam
Location: Baton Rouge, Louisiana
Duration: 7 Months
Softwares: Rhinoceros, Grasshopper, CNC routing, Clayon, 3D Potter, Climate Consultant, Photoshop, Illustrator, Indesign

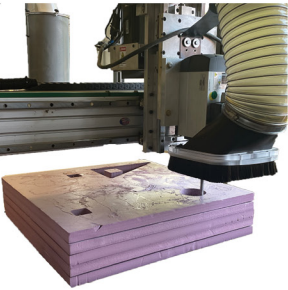

Brief & Concept

The LSU's Hill Farm is positioned on the east campus entrance. The goal of the green wall is to provide a solution to re-establish LSU's Hill Farm as an entry axis of campus.

FABRICATION PROCESS

CNC routing

Assemble foam formwork

Plaster pour and dry

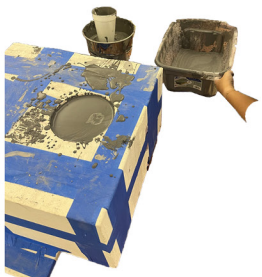

Remove foam formwork

Plaster Formwork: side face

Plaster Formwork: interior face

Stoneware slips pour

Remove plaster formwork

Trim

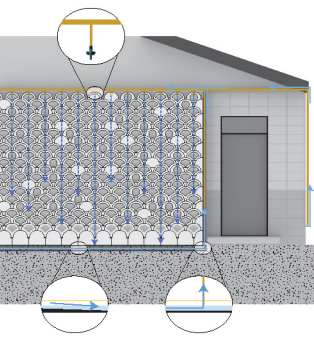

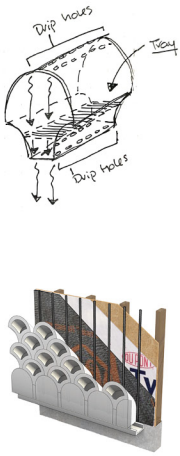

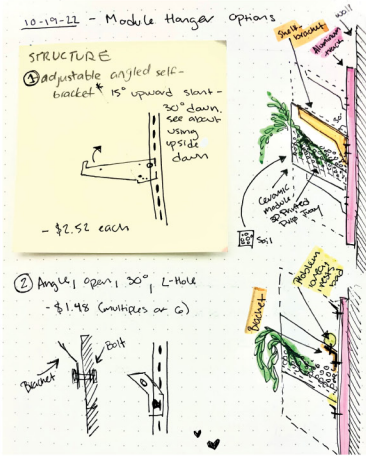

Glaze

Drill

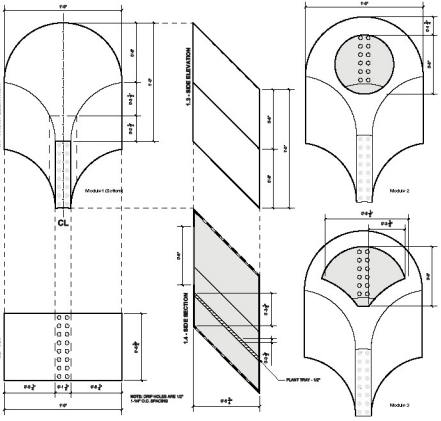

Fire

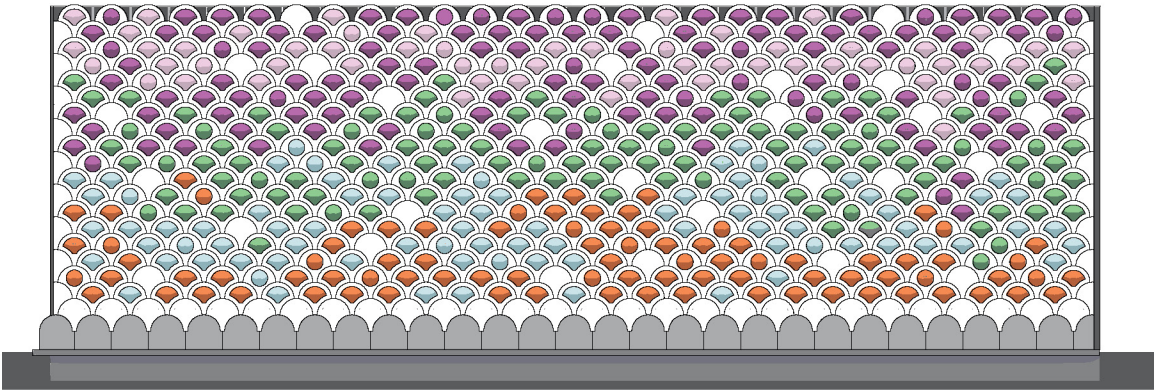

Wall System

Irrigation System

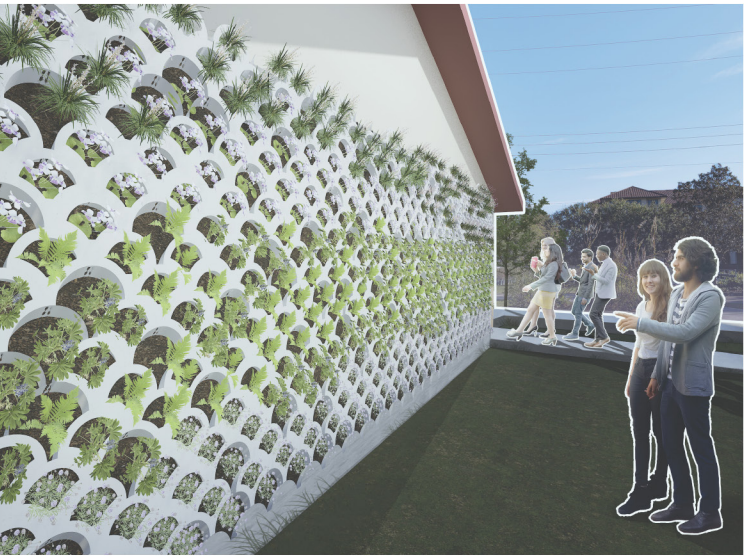

Fabrication Drawings

This is a stackable, modular green wall system that allows plants to grow independently for vibrant and dynamic facade. Plant habitability and constructibility is the driving factor of the design.

- Plant Types
- Monarda punctata (Spotted bee-balm)
FS, PS - low to medium water use
 - Oenothera speciosa (Pink lady)
FS, PS - low to medium water use
 - Salvia lyrata (Mealycup sage)
FS, PS, S - medium high water use
 - Athyrium filix-femina var. asplenoides (Asplenium ladyfern)
FS, PS - low to medium water use
 - Asclepias tuberosa (Common milkweed)
FS - high water use

Planting Plan

Three decorative wooden boxes are shown. One is a square box with a blue and gold border and a white interior. Another is a rectangular box with a similar border and a white interior. The third is a hexagonal box with a blue and gold border and a white interior. They are arranged in a cluster.

A person is shown pouring a thick, white, gelatinous substance from a container into a white bucket. The substance has a viscous, stringy texture.
